

# B2 MOBILE TEST SUITE

## The B2 Mobile Test Suite Includes:

**Smartphones to test and use with: Apple Pay®; Visa CDET (Contactless Device Evaluation Toolkit); Mastercard CTT (Contactless Test Tool) which includes M-TIP (Mastercard Terminal Integration Process) profiles**

**Pre-loaded static Device PANs in the phones' mobile wallet and Applications**

**Wi-Fi Enabled for Communications and Testing, and optional data plans if Wi-Fi is not available**

Performing payments using mobile devices are becoming more prominent as consumers are recognizing the convenience it brings them when making purchases. And, merchants are starting to take note of this tap-to-pay trend.

An increasing number of merchants are beginning to see the necessity of accepting this digital form of payment, as it not only provides a quick and easy way for customers to pay, but it also aligns with what is becoming a customer expectation -- ultimately helping to build customer loyalty and increase the merchant's customer service levels for the customer checkout process.

However, due to the complexity of the mobile payments integration -- which is required to ensure that mobile devices work properly through the point-of-sale all the way to the issuer -- it is extremely important to perform comprehensive testing of your contactless payment solution with mobile devices as part of your integration and acceptance prior to going live.

B2 Payment Solutions has launched its B2 Mobile Test Suite to assist merchants in this endeavor. The suite consists of a couple mobile devices with pre-loaded test cards that enable organizations to test various forms of mobile payments.

Similar to the physical EMV and contactless cards that B2 has provided for years, the B2 Mobile Test Suite is ideal for:

- User Acceptance Testing (application development and testing)
- Training Support Personnel
- Performing Demonstrations

# The Payment Experts

## Wi-Fi Enabled or SIM Card Available

No cellular service will be provided with the mobile devices, Wi-Fi will be enabled as the primary communications mode. If a customer does not have Wi-Fi available, B2 ships all phones with a SIM card that may be enabled with 'data only' functionality.

## Control and Management

The mobile devices will be managed under B2's Mobile Device Management system (MDM). With the MDM, B2 has the ability to remotely manage and update the applications, including the ability to control how the mobile devices are configured to limit instances where someone might inadvertently delete an app, change a setting, etc.

## Mobile Payment Options

The B2 Mobile Test Suite includes two smartphones – an iPhone® 8 and a Galaxy® S7. These phones will be pre-loaded and setup to provide the ability to test the Apple Pay® wallet (which includes American Express, Discover, Mastercard, and Visa test accounts) on the iPhone® and Visa and Mastercard test cards in an Android® applet on the Galaxy® device. Testing of other digital/ mobile devices and hardware (e.g. smartwatches, new versions of smartphones, etc.) may also be available upon request.

## Contact a B2 Expert Today to Learn More:

B2's extensive suite of solutions and services allows us to help lead our customers into the next generation of smart and secure solutions. By applying B2's services together with world-class technologies, the company delivers innovative solutions to customers across the globe. Contact B2 today for additional information and pricing.
