## **Chapter 1 - Overview**

### **1.1 USA Debit EMV Test Plan - Purpose**

This test plan is designed for clients who wish to utilize the USA Debit EMV Test Card Set, provided by B2, to perform internal testing, training and/or User Acceptance Testing (UAT) with U.S. processors.

The test plan benefits are derived from having a defined and repeatable testing methodology. In addition, the test plan includes test cases that test many functions which are required from a practical standpoint when releasing a debit-capable EMV POS Solution into the U.S. marketplace.

### **1.2 Target Audience**

This document is intended for integrators, developers, POS vendors and merchants who wish to develop an EMV POS Solution that supports EMV contact and contactless debit functionality.

This document assumes that the user has a good understanding of POS credit and debit transaction processing in the U.S. and a general understanding of EMV and contactless smartcard concepts.

### **1.3 System Requirements**

This is a standalone document that may be used with any POS architecture - e.g. standalone, semi-integrated or fully-integrated.

## Chapter 2 - Implementing U.S. Debit

### 2.1 U.S. Common Debit Scenarios

To meet the requirements of the Durbin amendment to the Dodd–Frank Wall Street Reform and Consumer Protection Act (“Durbin regulations”), and to provide merchants and/or acquirers the choice to route transactions from debit and prepaid card programs via unaffiliated networks; Visa, Mastercard, Discover and Debit Network Alliance (DNA) have introduced the following AIDs (commonly referred to as the “U.S. Common Debit AIDs”).

*U.S. Common Debit AIDs*

Brand	Scheme	AID
Discover	U.S. Common Debit	A0000001524010
DNA	U.S. Common Debit	A0000006200620
Mastercard	U.S. Maestro	A0000000042203
Visa	Visa Common Debit	A0000000980840

Other individual debit networks (in addition to DNA) may offer their own U.S. Debit AIDs that will reside on non-Visa, non-Mastercard and non-Discover branded cards.

Visa, Mastercard and Discover branded chip cards, issued in the U.S. under debit and prepaid card programs, will support both a U.S. Common Debit AID and a Global Debit AID (either standard Visa AID, standard Mastercard AID, Maestro AID or standard Discover AID).

- If a Global Debit AID (Visa, Interlink, Mastercard, Maestro or Discover) is used to initiate the chip transaction, the transaction must be routed via the corresponding card brand network. The network used is based on the AID selected.
- If a U.S. Common Debit AID is used to initiate a chip transaction, the resulting transaction may be routed via any of the card brand networks, or any unaffiliated network that has executed the necessary access agreement with Visa, Mastercard or Discover.

For both contact and contactless transactions, EMV POS Solutions may use the standard Application Selection process described for all EMV transactions. However, the merchant may filter the resulting Candidate List to remove multiple AIDs which access the same underlying funding account, such that only one AID per unique funding account remains. EMV POS Solutions must not assume that if a U.S. Common Debit AID is present, that this AID can be automatically selected to the exclusion of all other AIDs on the card, as those AIDs may relate to alternative products which the cardholder may wish to use (e.g. a credit product which is issued together with a debit product).

All AIDs which relate to debit or prepaid programs can be identified in the data read during Application Selection. The presence of the following two data elements identifies the AID as relating to a U.S. Debit or prepaid program:

- **Issuer Country Code (Tag 5F55)** - Two alpha digits with a value of 0x5553 (“US”)
- **Issuer Identification Number (Tag 42)** – Contains the Bank Identification Number (BIN) (i.e. the first 6 digits of the PAN).

There are three possible situations that must be handled:

1. The card has two AIDs where these data elements are present and the values of the Issuer Identification Number (IIN) are the same for both AIDs (**Scenario One below**):
  - The EMV POS Solution should assume that the AIDs with the same IIN access the same underlying funding account and therefore can remove one of those AIDs from the Candidate List.
  - For contact and contactless transactions, where there are only 2 AIDs present in

the card (1 Global AID and 1 U.S. Common AID), the EMV POS Solution may automatically select the single remaining AID in the Candidate List in accordance with Final Selection processing (section [2.5 Final Selection Processing](#) below). The card has more than 2 AIDs where these data elements are present and 2 of the AIDs have the same value for the Issuer Identification Number (IIN). In this scenario there will also be one or more other AID(s) present on the card that have either no IIN or a different IIN from the pair of AIDs with the same IIN (**Scenario Two below**):

- The EMV POS Solution should assume that the AIDs with the same IIN access the same underlying funding account and therefore can remove one of those AIDs from the Candidate List.
  - For contact transactions, the EMV POS Solution should present the remaining Candidate List choices to the cardholder in accordance with Final Selection processing (section 1.4.3 below).
  - For contactless transactions, the EMV POS Solution should automatically select the AID in the Candidate List that has the highest Application Priority Indicator (Tag 87) value.
2. When a card has two or more pairs of AIDs where these data elements are present and for each pair, both AIDs have the same IIN (**Scenario Three below**):
- For each pair of AIDs with the same IIN, the EMV POS Solution should assume that the AIDs with the same IIN access the same underlying funding account and therefore can remove one of those AIDs from the Candidate List - leaving only one AID for each IIN.
  - For contact transactions, the EMV POS Solution should present the remaining Candidate List choices to the cardholder in accordance with Final Selection processing (section 1.4.3 below).
  - For contactless transactions, the EMV POS Solution should automatically select the AID in the Candidate List that has the highest Application Priority Indicator (Tag 87) value.

**2.2 Application Selection for U.S. Debit with Cardholder Verification Handling**

For traditional magstripe debit transactions, merchants can decide when selecting the card type what cardholder verification to use for a debit transaction. This may be either to:

1. Prompt the cardholder to enter the PIN (commonly referred to as “PIN Preferring Merchants”). The cardholder can, in some implementations, bypass the PIN to allow for a signature transaction.
2. Prompt the cardholder to select either ‘Credit’ or ‘Debit’ (commonly referred to as “Credit/Debit Prompting merchants”). In this situation:

- **Credit** – means perform a Signature Debit transaction
- **Debit** – means perform a PIN Debit transaction

This section describes how to perform Application Selection for EMV U.S. Debit so that the routing choice of the merchant is retained, and the expected cardholder verification is performed based on merchant and/or cardholder preferences. This section has been split between; PIN Preferring merchants and Credit/Debit Prompting merchants.

### 2.3 PIN Preferring Merchants:

The following assumptions have been made when describing the U.S. Debit Application Selection process for PIN Preferring Merchants:

1. Solutions supporting U.S. Debit will have two kernel configurations:
  - **All CVM Configuration** – Terminal Capabilities (Tag 9F33) is set to support all CVMs the merchant wishes to support (e.g. PIN - offline/online, Signature and NO CVM).
  - **NO CVM Configuration** – Terminal Capabilities (Tag 9F33) is set to support only the NO CVM option.
2. When using a configurable kernel, the Terminal Type (Tag 9F35) and Additional Terminal Capabilities (Tag 9F40) values may remain the same regardless of the value used for Terminal Capabilities (Tag 9F33).
3. PIN Bypass is supported by all PIN supporting kernel configurations.
4. The payment application supports a NO CVM limit for all payment products.

The steps required to filter the Candidate List to fully support U.S. Debit are:

1. For each transaction the final amount for the transaction must be known prior to filtering the Candidate List.
2. Once the final amount is known and the Candidate List is created, the card type will be identified based on the list of AIDs in the Candidate List. There are two options:
  - The Candidate List does not contain any U.S. Common Debit AIDs – This is either an international or domestic credit card or an international debit card (USA Debit Test Cards 04, 06, 07, 15 and 16). In this case there are no additional steps required to filter the Candidate List and the application can continue to the Final Selection Process (section 1.4.3 below).
  - The Candidate List contains one or more U.S. Common Debit AIDs – This is a U.S. Debit card (USA Debit Test Cards 01, 02, 03, 05, 08, 09, 10, 11, 12, 13 and 14).
3. For U.S. Debit cards, the EMV POS Solution must determine which AIDs should remain in the Candidate List, based on the three scenarios described in Table 02 (above). Depending on the number of AIDs remaining in the Candidate List, one the following should be performed:
  - Candidate List only contains one AID – Continue to step 4.
  - Candidate List contains more than one AID – Continue to the Final Selection Process (section 1.4.3 below).
4. If the Candidate List only contains a single U.S. Common Debit AID, the EMV POS Solution must determine if the transaction is under or over the NO CVM limit:
  - Transaction is under the NO CVM limit – Set Terminal Capabilities (Tag 9F33) to “NO CVM Only Configuration” and continue with Final Selection Process (section 1.4.3 below).
  - Transaction is over the NO CVM limit – continue to step 5.

5. If the Candidate List contains a single U.S. Common Debit AID and the transaction is over the NO CVM limit for U.S. Debit, then set the Terminal Capabilities (Tag 9F33) to All CVM Configuration. Later during Cardholder Verification, the application will prompt for PIN and may allow the cardholder to bypass the PIN.

## 2.4 Credit/Debit Prompting Merchants:

The following assumptions have been made when describing the Application Selection process for merchants supporting Credit/Debit Prompting for U.S. Debit:

1. Solutions supporting U.S. Debit will have three kernel configurations:
  - **All CVM Configuration** – Terminal Capabilities (Tag 9F33) is set to support all CVMs the merchant wishes to support (e.g. PIN - offline/online, Signature and NO CVM).
  - **Signature and No CVM Configuration** – Terminal Capabilities (Tag 9F33) is set to support only Signature and the NO CVM option.
  - **NO CVM Configuration** – Terminal Capabilities (Tag 9F33) is set to support only the NO CVM option.
2. When using a configurable kernel, the Terminal Type (Tag 9F35) and Additional Terminal Capabilities (Tag 9F40) values may remain the same regardless of the value used for Terminal Capabilities (Tag 9F33).
3. PIN Bypass is supported in all PIN supporting kernel configurations.
4. The payment application supports a NO CVM limit for all payment products.

The steps required to filter the Candidate List to fully support U.S. Debit are:

1. For each transaction the final amount for the transaction must be known prior to filtering the Candidate List.
2. For each transaction the cardholder must select either Credit or Debit.
3. Once the final amount is known, the cardholder has selected either Debit or Credit, the Candidate List is created, the card type will be identified based on the list of AIDs in the Candidate List. There are two options:
  - The Candidate List does not contain any U.S. Common Debit AIDs – This is either an international or domestic credit card or an international debit card (USA Debit Test Cards 04, 06, 07, 15 and 16). In this case there are no additional steps required in relation to filtering the Candidate List and the application can continue to the Final Selection Process (section 1.4.3 below).
  - The Candidate List contains one or more U.S. Common Debit AIDs – This is a U.S. Debit card (USA Debit Test Cards 01, 02, 03, 05, 08, 09, 10, 11, 12, 13 and 14).
4. For U.S. Debit cards, the EMV POS Solution must determine which AIDs should remain in the Candidate List, based on the three scenarios described in Table 02 (above). For each of the scenarios described in Table 02 the AIDs to be removed from the Candidate List will also be based on the button selected by the cardholder (Credit/Debit):
  - **Credit Button Selected** – Remove all U.S. Common AIDs that share an IIN with a Global AID.
  - **Debit Button Selected** – Remove all Global AIDs that share an IIN with a U.S. Common AID.

Depending on the number of AIDs remaining in the Candidate List, one the following should be performed:

- Candidate List only contains one AID – Continue to step 5.

- Candidate List contains more than one AID – Continue to the Final Selection Process (section 1.4.3 below).
- 5. If the Candidate List only contains a single U.S. Common Debit AID, the EMV POS Solution must determine if the transaction is under or over the NO CVM limit:
  - Transaction is under the NO CVM limit – Set Terminal Capabilities (Tag 9F33) to “NO CVM Only Configuration” and continue with Final Selection Process (section 1.4.3 below).

If the Candidate List only contains a single Global Debit AID, the EMV POS Solution must determine if the transaction is under or over the NO CVM limit:

- Transaction is under the NO CVM limit – Set Terminal Capabilities (Tag 9F33) to “NO CVM Only Configuration” and continue with Final Selection Process (section 1.4.3 below).
- If the Transaction is over the NO CVM limit – Continue to step 6.
- 6. If the Candidate List contains a single U.S. Common Debit AID and the transaction is over the U.S. Debit CVM limit for U.S. Debit, the following should be performed:
  - Transaction is over the NO CVM limit – Set Terminal Capabilities (Tag 9F33) to “All CVM Configuration” and continue with Final Selection Process (section 1.4.3 below). PIN Bypass may still be allowed during EMV Cardholder Verification.

If the Candidate List contains a single Global Debit AID and the transaction is over the NO CVM limit for the Global Debit AID, the following should be performed:

- Transaction is over the NO CVM limit – Set Terminal Capabilities (Tag 9F33) to “All CVM Configuration” and continue with Final Selection Process (section 1.4.3 below). As the transaction is over the NO CVM limit and the only CVM supported by the terminal is Signature - the application should print a signature line on the receipt.

## 2.5 Final Selection Processing

Once the Candidate List has been built and U.S. Common Debit processing has been performed, Final Selection can begin. During this process the AID to be used for the transaction is selected.

If the Candidate List only contains one AID it is automatically selected, Final Selection ends and Cardholder Application Confirmation may be performed.

- Cardholder Application Confirmation is only required when the Application Priority Indicator - Cardholder Confirmation Indicator (Tag 87 bit-8) is set to ‘1’.
- If cardholder confirmation is required, the cardholder must be prompted to confirm that the application may be used. To do this the Application Preferred Name (Tag 9F12) or the Application Label (Tag 50) is displayed to the cardholder who must then confirm the selection.

If the Candidate List contains two or more mutually supported applications (AIDs), the application list should be presented to the cardholder for selection. However, EMV POS Solutions may auto-select the U.S. Common Debit AID (if present). In a Credit/Debit Prompting configuration, Application Selection may occur after Credit/Debit Selection. This means that it may be necessary to prompt again for Credit or Debit based on the Application Label or Preferred Name of the AIDs in the candidate list.

When presenting the Candidate List for selection, the application names may be displayed all on one screen or with one application name per screen, using navigation buttons to traverse the list (e.g. ‘Next’ and ‘Previous’). Regardless of the method used to display the Candidate List, the

application names displayed are determined as follows:

- Display the Application Preferred Name (Tag 9F12) if it is stored in a character set supported by the display. This can be determined by checking the Issuer Code Table Index (Tag 9F11). A value of '1' indicates that the Application Preferred Name is encoded using the Latin character set (i.e. contains standard English alphabetic characters).

Display the Application Label (Tag 50) if the Application Preferred Name is not present or cannot be displayed.

If the Application Preferred Name and Application Label are not present or cannot be displayed, display a default application name assigned to the AID by the EMV POS Solution.

Once the AID to be used for the transaction has been chosen, the kernel may relay the application information back to the payment application, so the following can be performed:

Set the Terminal Capabilities (Tag 9F33) – This will be based on the NO CVM limit for the card type based on the merchant environment (Credit/Debit) or PIN Preferring and the AID that has been selected (either the "All CVM Configuration", "Signature and NO CVM Configuration" or the "NO CVM Only Configuration"):

***Global Debit AID:***

- Transaction is over the NO CVM limit:
- PIN Preferring Merchant - Select the "All CVM Configuration"
- Credit/Debit Prompting Merchant – Select the "Signature and NO CVM Configuration"
- Transaction is under the NO CVM limit (for both PIN Preferring and Credit/Debit) – Select the "NO CVM Only Configuration"

***U.S. Common Debit AID:***

- Transaction is over the NO CVM limit (for both PIN Preferring and Credit/Debit) - Select the "All CVM Configuration"
- Transaction is under the NO CVM limit (for both PIN Preferring and Credit/Debit) – Select the "NO CVM Only Configuration"

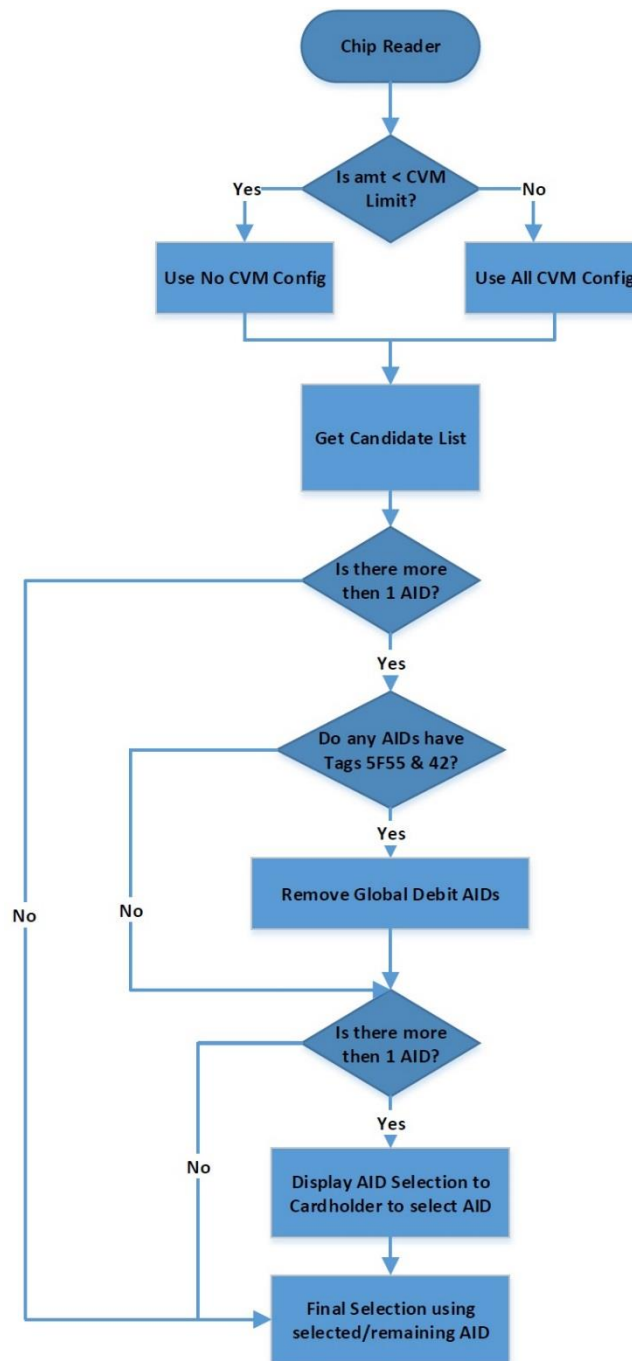

Set the Processing Code:

- International/Global AID selected – a credit Processing Code should be used
- U.S. Common Debit AID, Interlink, Maestro or Interac selected – a debit Processing Code should be used

The kernel can now select the AID on the chip and Final Selection ends.

In some implementations it may not be feasible to perform cardholder Application Selection. For these cases, an EMV transaction should not be performed if the chip card contains multiple applications, unless there is a method to inform the cardholder which application is being used.

## 2.7 U.S. Debit Processing Flowchart - Credit/Debit Prompting Merchants

## Chapter 3 - USA Debit EMV Test Plan

### 3.1 Test Case Outline

To perform the tests defined in this section you will require the USA Debit EMV Test Card Set provided by B2. The card numbers ('TCxx') used throughout will be consistent with that set. See [USA Debit EMV Test Card Set Profiles](#) in this document.

Types of Merchant Configuration include:

- PIN Preferring (PP)
- Credit/Debit Prompting (CD)

For test cards that have more than one AID, Application Selection methods include:

- Merchant-Controlled Candidate List (MCCL)  
Also referred to as 'filtering the candidate list' in the Chapter 2, entitled Implementing U.S. Debit
- Standard EMV Application Selection (SEAS)

**Note** - the short forms (in brackets, above) will be used in the naming of test cases.

Test cases are organized into categories by 'Merchant Configuration'.

The test cases for each of these cards are ordered according to type of merchant and (where applicable) the method used to select the application (where the card has more than a single AID).

### 3.2 Selecting Applicable Test Cases

The test cases have been organized into four categories based on merchant configuration. Users of this document should select the relevant configuration and only use test cases applicable to that configuration:

- [PIN Preferring, Merchant Controlled Candidate List](#)
- [PIN Preferring, Standard EMV Application Selection](#)
- [Credit/Debit Prompting, Merchant Controlled Candidate List](#)
- [Credit/Debit Prompting, Standard EMV Application Selection](#)

### 3.3 USA Debit EMV Test Cases

**Important Assumption:** All EMV Floor limits are set to \$0.00.

**Important Notes:**

- **As of Version 8.00 of this document, Test Card 15 v4.0 was replaced with v5.0 and Test Card 16 v5.0 was replaced with v6.0. There are significant changes to these two cards.**  
**TC 16 test cases have NOT been updated to reflect the changes. When that occurs this notification will be removed.**
- When the application prompts for Cashback, outcomes (Approval / Declined) may differ from one terminal configuration or host to another. It is advised that, if possible, Cashback be disabled.
- As of Version 5.0 of Test Card 15, this Interac Flash card has a BIN range of '001202'. These cards are supported by all Canadian processors but are not necessarily supported by all U.S. and International processors. Check with your acquirer account representative to determine if the Interac Flash BIN '001202' range is supported by their development host. If your processor does not yet support Interac Flash, the card will function properly at the POS but it will not obtain a host approval.

The format used for the Test Case naming is as follows.

**DD.AAAA.Cxx-Tyy**, where:

- **DD** is:  
**PP** - PIN Preferring  
**CD** - Credit/Debit
- **AAAA** is:  
**MCCL** - Merchant Controlled Candidate List)  
**SEAS** - Standard EMV Application Selection
- **Cxx** is:  
The Card Number (01-16)
- **Tyy** is:  
The Test Number (resets to “01” for each card)

e.g.

**PP.MCCL.C01-T01** – uses USA Debit Test Card 01 and would be run if the merchant is PIN Preferring and uses the Merchant-Controlled Candidate List method to choose the application. In this category there are four test cases and T01 is the first test case.

**CD.SEAS.C03-T05** – uses USA Debit Test Card 03 and would be run if the merchant supports Credit/Debit Prompting and uses the Standard EMV Application Selection method to choose the application. In this category there are five test cases and T05 is the fifth test case.

### 3.3.1 Test Case ID and Title

**PP.MCCL.C01-T01** PIN Preferring, Merchant Controlled Candidate List  
Card 01, Test 01

The first section is the Test Case ID followed by the test Title. The Title is intended to be as brief and concise as possible. In some situations, the test case Purpose and the test case number and suffix are required to distinguish the test from other similar test cases.

### 3.3.2 Type

**Type:** Contact

The second section identifies the test case Type. Two Types are supported – 'Contact' and 'Contactless'

### 3.3.3 Purpose

**Purpose:**

Test that when a Visa card with more than one AID is inserted, the application:

1. Does not prompt for Credit or Debit
2. Does not prompt for Application Selection
3. Automatically selects the 'US Debit' AID

The third section is the test case Purpose – this defines what is being tested by the test case.

### 3.3.4 Pre-Requisites

**Pre-Requisites:**

1. Application is configured as PIN Preferring
2. Application Selection is Merchant Controlled Candidate List
3. Terminal supports the following AIDs: A0000000031010, A0000000980840

The fourth section identifies any Pre-Requisites that must be completed prior to running the test case. Each test Type will have a standard set of pre-requisites, documented at the beginning of the test section.

### 3.3.5 Steps

**Steps:**

1. Start a Purchase transaction for \$10.00
2. When prompted for card entry, insert Test Card xx

The fifth section contains the Steps required to run the test case. Each step is a simple one action process. In most cases, only the steps applicable to the test being performed are documented, not all steps required to run the complete transaction.

### 3.3.6 Pass Criteria

**Pass Criteria:**

1. “Chip” – indicates the card was inserted
2. “A00000000980840” – AID selected was ‘US Debit’

The sixth section identifies the test case Pass Criteria. This may range from a simple prompt or message on a screen, to contents of a receipt. Receipt information shown is required, but the exact receipt text may differ based on your specific merchant implementation and/or processor requirements.

### 3.3.7 Comments

**Comments:**

The last section identifies any general Comments. This section is intended to provide guidance or information that does not fit easily into any of the sections above. For most test cases this section is blank.

### 3.3.8 Complete list of AIDs used in USA Debit EMV Test Card Set

AIDs that should be loaded in the acceptance device when testing using the USA Debit EMV Test Plan are seen in the table below.

### 3.3.9 PIN Preferring, Merchant Controlled Candidate List – Test Cases

#### 3.3.9.1 PP.MCCL.C01-T01

##### **PP.MCCL.C01-T01** PIN Preferring, Merchant Controlled Candidate List Card 01 - Test 01

**Type:** Contact

**Purpose:**

Test that when a Visa card with more than one Debit AID is inserted, the application:

1. Does not prompt for Credit or Debit
2. Does not prompt for Application Selection
3. Automatically selects the 'US Debit' application
4. Prompts the user to enter a PIN

**Pre-Requisites:**

1. Application is configured as PIN Preferring
2. Application Selection is Merchant Controlled by filtering the Candidate List
3. Terminal supports the following AIDs: A0000000031010, A0000000980840

**Steps:**

1. Start a Purchase transaction for \$10.00
2. When prompted for card entry, insert Test Card 01
3. Enter PIN ("1234") when prompted

**Pass Criteria:**

1. User is not prompted to select 'Credit' or 'Debit'
2. User is not prompted to select an application
3. The 'US Debit' application is automatically selected
4. The transaction is approved
5. Receipt shows:
  - a. "Chip" – indicates the card was inserted
  - b. "A0000000980840" – AID selected was 'US Debit'
  - c. "0135" – last 4 digits of the PAN
  - d. "Verified by PIN" – PIN CVM was used

**Comments:**

## Chapter 4 - USA Debit EMV Test Card Set Profiles

### CAUTION

Multiple consecutive incorrect PIN entry attempts may result in the card being blocked.

This is known as being 'PIN Blocked'.

If this occurs, it will no longer be possible to enter an Offline PIN,  
which will cause all future transactions to be declined.

**\*\*\* It is not possible to unblock a 'PIN Blocked' card \*\*\***

### NOTICE

Interac Flash card has a '001202' BIN range. These cards are supported by all Canadian processors but are not yet supported by all U.S. and international processors.

**\*\*\* Check with your acquirer account representative to determine if the Interac Flash BIN range is supported by their development host. If your processor does not yet support Interac Flash, the card will function properly at the POS but it will not obtain a host approval. \*\*\***
